Subject: Dynamic Destruction Weapons

Weapons which are in the category of **DYNAMIC DESTRUCTION WEAPONS** are a category of weapons which are able to be targeted to an area, or a group of people or to even just a single person. If you ask why would such a weapon be developed and what are the advantages of such a weapon ??? Here are the characteristics of such a weapon and why this category of weapon has been regarded as ultra top secret by all organizations or countries working on them.

- 1 Design it to have a 100% effective kill rate.**
- 2 Design the Agent to be able to be delivered by multiple delivery systems over both a short time or a long time to idle in wait for the “kill instruction”:**
 - 2.1 Drinking water supply**
 - 2.2 Soft drink supply**
 - 2.3 Piggyback this “KILLER” weapon into the juice which is jabbed into people for the “COVID VAX JAB”**
- 3 Design the agent so it is able to live in the body for a potentially a long time and be ready to go to work the minute the agent enters the body or it is activated at some time in the future so as to cloud or mask both the source and delivery system.**
- 4 Design the agent so it is able to work in a diluted form or a concentrated form.**
- 5 Design the agent so it is able to kill in spite of differences in body genetics and immune response reactions.**

Now that you see what the design parameters are for this chemical/biological agent needs to do how is it possible to EASILY make such a deadly agent ?

- 1 Begin with a graphene based NANOBOT material which has these characteristics:**
 - 1.1 The nanobot core used must be one of the 5G activated nanobot cores which activate on a “group ID” signal from a 5g RF source (either a cell phone tower or a hand held 5g device.)**
 - 1.2 The shell of the NANOBOT must survive a wide range of water temperatures before activation.**
 - 1.3 The release pocket in the NANOBOT must be large enough to hold enough of the agent so that a diluted solution of the NANOBOTS will still carry enough of the agent to kill the host.**
- 2 The current preferred agent is called “COBRA 6”**
 - 2.1 As the name suggests this is the sixth variant “improvement” in the developmental series.**
 - 2.2 It is designed to have an effective 100% kill rate when injected and activated.**
 - 2.3 It has nerve agent parts which halt nerve functions.**
 - 2.4 It has special cell wall destruction functions for specific internal organs.**

- 3 How do we build such an agent ?
 - 3.1 Begin with snake and spider venoms which do the following:
 - 3.1.1 Begin with highly active neuro-toxins which can halt the heartbeat or breathing.
 - 3.1.2 Add the digestive toxins which begin digesting whatever part of the body they happen to be in at the time of activation
 - 3.2 Then alter the toxins:
 - 3.2.1 Make the toxins more potent by juggling the genetics and chemical recipes of the toxins.
 - 3.2.2 Make the toxins more stable so that when they are idling in the NANOBOT “holding cell” (container) they do not weaken.
- 4 When all is ready begin manufacturing the liquid agents in high volume.
- 5 Begin distribution.

HOW DO THE NANOBOTS WORK

Think of the NANOBOT as a very tiny container which has a group number as well as a unique number for each nanobot in the group, also the NANOBOTS are tuned to specific RF frequencies which when modulated causes the NANOBOT to dump it's cargo area into the blood stream. So lets follow the steps:

- 1 A request is issued with the following specifications:**
 - 1.1 Size of the desired NANOBOT**
 - 1.2 Size of the desired cargo area of the NANOBOT**
 - 1.3 Temperature range the NANOBOT must operate within**
 - 1.4 Base frequency for the RF triggering**
 - 1.5 Length of the GROUP ID string and modulation to trigger on**
 - 1.6 Length of the UNIQUE ID string and the modulation to trigger on**
- 2 Then the contents to be loaded into the group of NANOBOTS is brewed up**
- 3 The contents are loaded into the NANOBOTS and the covers sealed on**
- 4 The fluid which holds the nanobots is loaded into BULK containers if going to water reservoirs for distribution or into vials with lot numbers if being used for an inject-able situation like a COVID JAB JUICE.**
- 5 Both the water distribution project as well as the EMBEDDED COVID VAX id project are using the same base level technology.**

EPILOGUE

Remember that our only true peace and protection comes from Jesus and we must look to Jesus 100 % for wisdom and guidance each new day and all day each day. **I AM SAD TO REPORT THAT BULK DELIVERIES OF THESE AGENTS ARE BEING MADE TO ALL THE DRINKING WATER RESERVOIRS IN THE USA MAINLAND.**
